

Studs

with a length of engagement equal to about $1,25 d$

DIN
939

ICS 21.060.10

Supersedes December 1972 edition.

Descriptors: Fasteners, studs.

Stiftschrauben; Einschraubende $\approx 1,25 d$

In keeping with current practice in standards published by the International Organization for Standardization (ISO), a comma has been used throughout as the decimal marker.

Dimensions in mm

1 Scope and field of application

This standard specifies dimensions and technical delivery conditions for studs intended for use mainly in cast iron. As specified in DIN 267-2, the stud end thread shall be produced to tolerance Sk6 as in DIN 13-51, unless the stud is designated Fo ('without interference-fit thread') or Sn4.

2 Dimensions

 b_1 = stud end b_2 = nut end

Continued on pages 2 to 5.

¹⁾ For lengths, *l*, of 125 mm or less.

²⁾ For lengths, *l*, above 125 mm up to 200 mm.

³⁾ For lengths, *l*, exceeding 200 mm.

Lengths above 400 mm shall be graded in 20 mm steps.

Bracketed sizes and intermediate lengths should be avoided if possible.

The zone between the continuous thick lines indicates the range of commercial sizes of studs with coarse pitch thread.

Studs of sizes above this range cannot be manufactured with a nut end thread length, *b*₂, as specified in the table. In such cases, *b*₂ will be approximately equal to $l - (x_1 + 3)$. For sizes above the dashed line, $b_2 + x_1$ will be less than $1,2 b_1$. The nut end of these studs shall be rounded (i.e. given a DIN 78—L type end), unless the end is already marked with the property class.

3 Technical delivery conditions

Table 2: Technical delivery conditions

Material		Steel	
General requirements		As specified in ISO 8992.	
Thread	Tolerance	Stud end: Sk6.	Nut end: 6g.
	As specified in	DIN 13-51.	DIN 13-12 and DIN 13-15.
Mechanical properties	Property class (material) ¹⁾	5.6, 8.8 or 10.9	
	As specified in	DIN EN 20 898-1.	
Limit deviations, geometrical tolerances	Product grade	A	
	As specified in	ISO 4759-1.	
Surface finish	Property class 5.6: as processed. Property classes 8.8 and 10.9: (thermally or chemically) blackened. DIN 267-2 shall apply with regard to surface roughness. DIN EN 26 157-3 shall apply with regard to limits for surface discontinuities. ISO 4042 shall apply with regard to electroplating. The limits of thread size shall also apply after coating.		
Acceptance inspection	As specified in ISO 3269.		
¹⁾ Use of other property classes or materials shall be subject to agreement.			

4 Designation

Designation of an M12 stud with interference-fit thread as in DIN 13-51, with a nominal length, l , of 80 mm, and assigned to property class 8.8:

Stud DIN 939 — M12 × 80 — 8.8

Designation of an M12 stud without interference-fit thread (Fo), with a nominal length, l , of 80 mm, and assigned to property class 8.8:

Stud DIN 939 — M12 Fo × 80 — 8.8

Where studs are to be supplied with a different thread on either end, this shall be indicated in the designation, with the symbol for the thread of the stud end preceding that for the nut end, e.g.:

Stud DIN 939 — M12 — M12 × 1,25 × 80 — 8.8

DIN 962 shall apply to the designation of type and finish, with additional information to be given on ordering. The DIN 4000 — 2 — 4 tabular layout of article characteristics shall apply to studs as covered in this standard.
